Gabriel's work includes patent prosecution in the biotechnology sector, including cancer biology and therapeutics, immunology, small molecule therapeutics, and research tools.

Gabriel has managed all aspects of patent portfolios across various technologies, including US and foreign patent applications for mechanical, chemical, software, and biology inventions. Prior to joining ArentFox Schiff, Gabriel was a patent agent at a mid-sized law firm in Boston.

Gabriel received his PhD in Biomedical Research from the University of Massachusetts Medical School. His research focused on the immunology of RNA and DNA viruses and antiviral therapeutics against these viruses. At UMass, he worked on novel decoy liposomes that could be produced on demand with different viral receptors, thereby acting as a molecular sink and infection dead-end. Gabriel has authored and presented numerous scientific publications in the fields of viral immunology, antivirals, antimicrobials, antifungals, and neuroscience.
